The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-43 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1,19,29,35,41,45 & 48 are of U.S. Patent No. 6,793,959. Although the conflicting claims are not identical, they are not patentably distinct from each other because the present claims are fully included within the pan release agent of the prior application.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 6-13, 24-31 & 34 are rejected under 35 U.S.C. 102(b) as being anticipated by Yang (4,832,975).

Yang discloses tailored triglycerides with improved auto ignition characteristics. The composition contains an interesterified fat having a combination of medium-chain triglycerides and long-chained triglycerides in the relative amounts of those set forth in the claims (see example 1).

Although the smoke point is not specifically outlined in the patent, one of ordinary skill in the art would expect it to fall within the range of the claims due to the improvement in Yang to interesterification of MCT with LCT.

The fat in Yang is for frying and would be expected to also have "pan release" qualities. But preamble limitations do not alone constitute an unobvious distinction in product claims.
